

TRACK MOUNTED WINDSHIFTER

The Trackvac Track Mounted Windshifter range has been designed with a low level 1500mm wide vibratory belt feeder, as most screens & trommels won't convey into their feed hopper as they are all designed too high. The Trackvac is based on the design of the Airvac, sucking the material from the belt in 2 positions and blowing it into a skip. There is hydraulic adjustment on the vac heads to find best positioning on tricky materials.

The difference between the 2 units is that the Trackvac 1.0 is a straight through machine and the Trackvac 2.0 has a drum separator and side conveyor fitted to extract the heavy material, we can also offer the option of a magnetic head drum on the side conveyor.

Features & benefits include

- Low level 1500mm wide vibrating feeder belt
- Primary extraction vacuum head
- Expansion chamber with Air-knife
- Secondary extraction vacuum head
- Magnetic head drum on main belt
- De-stoning conveyor
- Caterpillar 4.4 diesel hydraulic power pack infinitely controlled

Screenpod TRACKVAC 1.0 Air Separation Technology
